SCHOOLS WILL REQUIRE EACH STUDENT to wear an electronic beacon to track their location to within a few feet. PEOPLE will be FORCED TO WEAR BEACONS THAT UTILIZES 5G AND ARTIFICIAL INTELLIGENCE, ASSIGN A SATELLITE BEAM TO EACH PERSON AND ARE "TAGGED" AND FOLLOWED BY AN AVATAR and more

Handout June 13, 2020. Total tracking, surveillance and live monitoring with the use of 5G "beacons" or "medallions" and artificial intelligence has been around prior to COVID-19—an intelligent scheme to usher in total control. When your children return to some schools in the fall they, and maybe soon all people, will be <u>forced</u> to wear a "beacon" which

- Can assign you a "beam" via satellite
  (see YouTube: **How it works - O3b mPOWER technology** https://www.youtube.com/watch?v=Dw6RyuVSQo0
- Live precise global location positioning and contact tracing of thousands of people utilizing 5G and satellites
- Using Artificial Intelligence for many things, such as
- Private AI powered neural mesh network wirelessly micro-geofences massive sites
- Create dashboards to profile leading into a surveillance society keeping your <u>live and historical profile</u> of your temperature, where you've gone, your habits, etc. and records all movements and your locations previous and future predicted [think Block-chaining you]
- Utilizing Bluetooth or Smart ID Cards, sensors [everywhere], live status maps, machine-to-machine learning, etc.
- "Opting in" through APPs/computer voids privacy invasion as people agree now to their terms
- Contact tracing. Tracking. Monitoring. Crisis management [voice?]. Automatic Rostering
- Offers new types of building access control, automatic distancing alerts, grouping and zone alerts (via AI)
- Can create an Avatar of you that tags and follows you via a Dashboard—a surveillance society
- Compatible with contact tracing apps made by others (and/or other private/public partnerships)
- Grabs your data and can give it to other countries
- Volantechnology.com does most of the above with zero dependency on cellular, GPS, or Wi-fi

IDENTIGY COMMAND & CONTROL – Source: Wired Magazine and <u>www.identigy.com</u>

Marcus Muster, director of technology at <u>the Kiski School</u>, a private boarding school in Loyalhanna Township, Pennsylvania, about 40 miles east of Pittsburgh, says he has talked with <u>Identigy</u>, a company advertising a system to record people's movements; combined with smart ID cards or Bluetooth beacons, it could help manage Covid risk.

Volan [volantechnology.com] is already in schools (New Jersey/Ohio) uses Artificial Intelligence and the System is first AI-based Location Positioning, patented software which creates a Wireless Neural Mesh Network uses precise-location positioning and micro-**geofencing** to automate private contact tracing [and more].

Volan's Domain Owner is Google and it Oversees *Polices Itself*:
www.StopSpying.org offers <u>Surveillance Technology Oversight</u>. **ITS DOMAIN IS REGISTERED to GOOGLE LLC**, yet their founder states: "It's been one of the most disturbing parts of this," says <u>Albert Fox Cahn</u>, founder of the <u>Surveillance Technology Oversight Project</u>.

What will you do this fall for school? For all of us? Coming next will be comply or go nowhere. Chip or go nowhere.

Volan Continued…

Contact tracing. Crisis management. Automatic Rostering. And more.

Volan's private neural mesh network wirelessly micro-geofences **massive sites**. Live precise location positioning and contact tracing of thousands of people. AI patented technology. Self-healing software system. Zero dependency on cell, GPS, Wi-Fi.
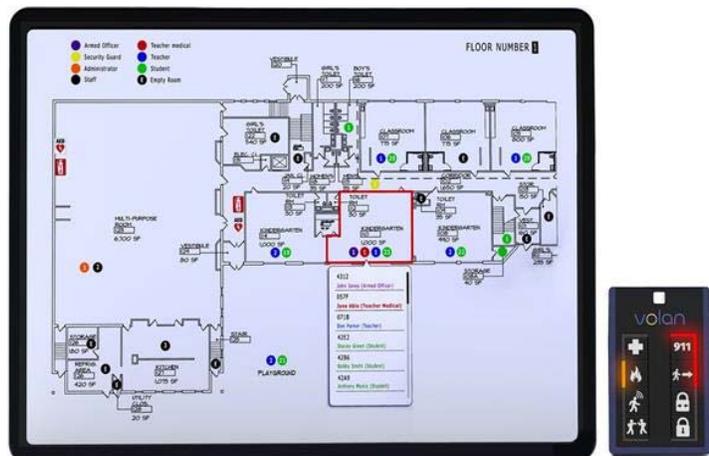

Ready to Go? Volan is implementing VPS at schools, hotels, and businesses now.

VPS's Artificial Intelligence for Contact Tracing

Volan's AI-powered neural mesh network technology uses precise-location positioning, micro-geofencing, and proximity detection to enable private contact tracing of thousands of individuals on massive sites within a few feet. Volan's system traces both live *and* historical exposure and automatically send risk alerts. VPS Temperature Tracking and connecting it to the VPS tracking system. With micro-geofencing, [next micro-needling of tattoo vaccinations] Volan can automate social distancing enforcement and management of protected zones, detect unsafe distances or groupings of individuals in real-time, and send violation alerts to exposure rings... all with zero dependency on cellular, GPS, or wifi.

HOBOKEN, N.J., June 05, 2020 (GLOBE NEWSWIRE) -- Volan Technology, providers of the only AI-based location positioning system that can dramatically improve workplace safety, announced today the official launch of its Volan Positioning System (VPS).

School kids to get beacon with beam assigned by satellite like Medallion Cruise Lines?

Wired Magazine: : https://www.wired.com/story/schools-surveillance-tech-prevent-covid-19-spread/ -
Covid Tech Tracking of Kids
When students return to school in New Albany, Ohio, in August, they'll be carefully watched as they wander through red-brick buildings and across well-kept lawns—and not only by teachers. The school district, with five schools and 4,800 students, plans to test a system that **would require each student to wear an electronic beacon to track their location** to within a few feet.
